

Moving Shots Matrix: Pan, Tilt & Zoom Practical Drills

Unit 4 — Day 16 Activity Worksheet | Standard: CTE-CTB MN CTB.03.01

Student Name: _____	Date: _____	Station #: _____
Peer Evaluator: _____	Camera Model: _____	Tripod ID: _____

Instructions: Complete each camera drill with a peer partner. Apply proper tripod fluid head drag adjustments and maintain lead space where required. Evaluate each drill using the 1–4 scale below.

- 1 - **Beginning:** Jerky motion, no static holds, incorrect framing
- 2 - **Developing:** Acceptable, minor bounce/stops, fair lead space
- 3 - **Proficient:** Smooth motion, clear 3s holds, accurate lead space
- 4 - **Advanced:** Flawless execution, professional broadcast quality

Drill & Camera Operation	Execution Criteria & Standard	Score (1-4)	Peer Evaluator Notes / Feedback
1. Slow Reveal Pan (Horizontal Left → Right)	Hold static frame 3s before starting. Smooth body rotation across studio floor. Hold static frame 3s at end frame. Zero vertical wobble.	[]	
2. Fast-Tracking Pan (Following Talent Action)	Maintain consistent lead space in front of walking talent. Smooth speed matching with zero whip-panning or jerky corrections.	[]	
3. Controlled Vertical Tilt (Desk → Overhead Graphic)	Adjust fluid vertical drag knob. Tilt smoothly up from anchor desk to top graphic display. Stop without bounce or settling delay.	[]	
4. Smooth Optical Zoom (Wide Shot → Medium Close-Up)	Use lens rocker switch pressure (no digital zoom). Maintain focus on subject eyes throughout zoom movement.	[]	
5. Compound Move (Pan + Tilt Diagonal Track)	Coordinate simultaneous horizontal pan and vertical tilt to follow talent moving diagonally across set floor.	[]	
6. Dynamic Re-framing (Subject Lead Room Adjustment)	Pan smoothly left/right as talent turns head or shifts seating position to maintain rule of thirds and nose room.	[]	

Self-Reflection & Technical Troubleshooting

1. **Fluid Drag Calibration:** What friction/drag setting worked best on your tripod head, and how did it prevent jerks at start/stop?
2. **Motivated vs. Unmotivated:** Describe one moment during today's drills where a camera move felt 'unmotivated' and how you fixed it.
3. **Lead Space Control:** Why is placing extra frame space in front of a walking subject critical for broadcast viewers?
